PROFESSIONAL SUMMARY

Senior Full Stack Engineer with 6+ years of experience building secure, production-grade applications, with a strong focus on Node.js, React, and TypeScript. Experienced integrating LLMs into real-world applications, developing backend workflows for document processing, external data retrieval, and AI-powered features. Owned production incident response on a payments platform processing USD 1B+ annually and contributed to government software used by 2,000+ public agencies. Experienced working directly with clients, from requirements through deployment. Core stack: Node.js, React, TypeScript, and NestJS.

PROFESSIONAL EXPERIENCE

Senior Backend Engineer, Payments

Squire — US barbershop payments platform (USD 1B+ processed annually) | Remote | Nov 2025 – Aug 2026

- Improved the system's security and reliability by making the architectural decision to redesign the checkout flow as fully webhook-driven using Node.js, NestJS, and Stripe. This eliminated the frontend as a dependency for payment confirmation.
- Led the end-to-end integration of Cash App Pay as a new payment method through Stripe: API design, webhook handling, end-to-end validation and production rollout, with 90% of its transactions succeeding right after deployment.
- Owned production incident response for the payments service, bringing incidents down from 1–2 per day to 1–2 per week: diagnosed and fixed bugs where users did not receive their payments, made sure the money reached them, and used backend metrics to track and diagnose issues.

Full Stack Developer

OpenGov — U.S. government contract management (2,000+ public agencies) | Remote | Apr 2024 – Nov 2025

- Built and maintained secure React and Node.js (NestJS) applications backed by PostgreSQL, designing database schemas, migrations, and queries with Sequelize under strict regulatory and compliance standards.
- Implemented backend integration of the OpenAI API for an AI-powered contract analysis feature, retrieving and processing documents from AWS S3 to enable contextual, conversational interactions where users could query contract content.
- Developed and maintained asynchronous Kafka job processing for user-requested .docx report exports, eliminating request timeouts through background generation, WebSocket notifications, and retry handling.
- Designed reusable components for an internal npm component library built with Material UI.
- Reduced accessibility issues from 20 to 0 across the screens I worked on, as measured by axe DevTools.

Full Stack Developer

Codea IT — software consultancy | Remote | Nov 2022 – Apr 2024 (concurrent with Epidata)

- Managed a user funds pool and authorized withdrawals of real money with no rollback, with strict backend validation of every withdrawal.
- Worked directly with the client, meeting daily to scope problems, translate them into designs and ship against them.
- Sole engineer and owner of a client blockchain gaming platform with on-chain payments, taking the client's requirements from discovery and architecture through implementation, testing, deployment and maintenance in React, Tailwind CSS, Node.js and Solidity.
- Synchronized on-chain payment and transaction data with the application database over WebSockets, handling late confirmations, duplicate events and partial writes so both systems stayed consistent under concurrent real-time play.
- Implemented secure MetaMask wallet connections and on-chain transaction flows with Web3.js and Ethers.js, and fixed production issues across frontend, backend and contract integration.

Full Stack Developer
Epidata — software consultancy | Buenos Aires, Argentina | Aug 2020 – Apr 2024

- Delivered full stack features for the web and React Native apps of a health insurance provider (obra social), building responsive interfaces with Material UI from high-fidelity Figma designs and RESTful APIs in Node.js, Express and TypeScript.
- Migrated the entire React Native app from React Navigation 3 to 6, part by part and with minimal supervision, moving from static route configuration to component- and hooks-based navigation and improving the maintainability of the system.
- Grew from being mentored as a junior to mentoring 2 of the 4 engineers on the team, leading their technical onboarding through code reviews and pairing sessions until both delivered features independently.

PROJECTS

Decentralized P2P Trading Marketplace — *solo project | 2024 – Present | https://p2ptrade.pages.dev/market · github.com/solnoguera*

- Designed and built a peer-to-peer trading marketplace end to end, owning architecture, implementation and every technical decision.
- Built a user funds pool from scratch with no soft balance: withdrawals are authorized with signed (EIP-712) vouchers that have an expiry and a unique ID, validated against on-chain transactions, in a system where transactions cannot be rolled back.
- Designed MongoDB schemas to scale: compound indexes matching the main queries, unique constraints (one voucher per transaction, unique voucher IDs), separate collections by data type, pagination, and queries that load only the needed fields.
- Implemented Solidity smart contracts integrated with a React and Node.js stack via Ethers.js and MetaMask, and handled blockchain and WebSocket events to keep on-chain and off-chain state synchronized.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), SQL, Solidity

Backend: Node.js, NestJS, Express.js, REST API Design & Integration, WebSockets, Socket.IO, Webhooks

Frontend: React, Next.js, React Native, Tailwind CSS, Redux, Material UI, Figma, Responsive UI

Databases: PostgreSQL, MySQL, MongoDB, Schema Design & Migrations, Query Optimization, Sequelize, Mongoose

Messaging: Kafka, Redis

Payments & Security: Secure Coding Practices, Secure SDLC, Compliance-driven Development, Payment Integrations (Stripe Connect, Cash App Pay), Webhook-driven Transaction Flows, Incident Response

Cloud & DevOps: AWS (EC2, S3, Lambda, ECS, Route 53, Secrets Manager), Docker, GitHub Actions, CI/CD

AI / LLM: Claude Code, Cursor, Codex, OpenAI API, LLM Integration, Conversational AI

Blockchain: Smart Contracts (ERC-20, ERC-721), EVM, Ethers.js, Web3.js, MetaMask

Practices: Architecture Decisions, Code Review, Mentoring, Agile, Incident Response, Client Collaboration

EDUCATION

National University of Hurlingham — University Technical Degree in Programming | Buenos Aires, Argentina | Expected Dec 2026

CERTIFICATIONS

Coderhouse — React.js | 2022
Coderhouse — React Native | 2022

LANGUAGES

Spanish (native) · English (professional working proficiency; 2+ years working in English with U.S. companies; Cambridge B2 First, 2019)
